

**A** tidal bore is a rare phenomenon that can occur when the outgoing flow of a river meets the incoming

tide of an ocean. The extreme incoming tide of the Bay of Fundy's Minas Basin creates a crest of water (i.e. the tidal bore) that travels upriver on several rivers around the Bay, temporarily reversing their flow twice a day.

The South Maitland Tidal Interpretive Park offers a view of Nova Scotia's largest river (The Shubenacadie River) where visitors may see the tidal bore at the following estimated times (Note: Visitors are encouraged to arrive 15 minutes in advance to avoid missing this natural phenomenon).
